Daniel Salazar

Senior AI & Data Engineer with 6+ years of experience designing scalable cloud data platforms and building **GenAI-powered applications**. Proven track record architecting LLM-based systems, ETL pipelines, and real-time analytics that drive **user retention, operational efficiency, and business growth**.

TECHNICAL SKILLS

- **Languages**: Python, SQL, Transact-SQL, PL/SQL, JavaScript, C++, Java, PHP, GO.
- **Frameworks**: FastAPI, Flask, Django, React, .NET Core, DBT.
- **Cloud**: GCP (Compose Engine, Cloud Run, Cloud SQL, BigQuery, VertexAI), Azure (Data Factory, OpenAI, Databricks, App Services), AWS (S3, Lambda, Redshift, SageMaker, Bedrock, OpenSearch, ElectiCache).
- **AI/ML**: LLM API (OpenAI, Azure, GCP, AWS, Anthropic, Inflection), LangChain, Prompt/Model Fine-tuning, Pinecone, TensorFlow, BERT.
- **Data:** Airflow, Databricks, Knime, Pentaho | MySQL, SQL Server, PostgresSQL | BigQuery, RedShift, Snowflake.
- **DevOps/Tools:** Docker, Kubernetes, Git, CI/CD (Azure DevOps and Git Actions)
- **Analytics:** Tableau, Power BI

EXPERIENCE

PRINCIPAL AI ENGINEER | **GENERAL MILLS** | CPG INDUSTRY | GOLDEN VALLEY, MN
OCT 2022 – PRESENT

- Develop AI Agents
- Training on new workflows and methods of using AI
- Research and experimentation on new AI technologies
- Lead AI projects

SENIOR AI ENGINEER | **YANA** | *AI MENTAL HEALTH APP* | REMOTE
MAY 2022 – OCT 2025

- Built a **GCP-based Data Lake** (Terraform) and Airflow ETL pipelines, boosting analytics performance by **70%** and pipeline efficiency by **90%**.
- Led development of a **GenAI-powered chatbot**, increasing user retention by **10%** and establishing it as the app's core feature.
- **Architected and deployed a multi-agent LLM system** detecting crises and ethical violations, proactively flagging 1% of inputs as crises and 0.7% as violations, enabling timely interventions.
- Developed **and launched a recommendation engine**, driving a **10%** increase in user retention.
- Created **self-service dashboards** (Tableau, Power BI) delivering actionable insights for leadership.
- Developed and deployed **LLM-powered services on GCP (Cloud Run) with Docker**, streamlining the deployment pipeline for faster iteration, scalability, and reliability.

DATA ENGINEER | **SOMOS MAKERS** | *FINTECH* | REMOTE
MAY 2021 – MAY 2022

- **Designed and implemented ETL pipelines** using Microsoft Data Factory and T-SQL, streamlining data extraction, transformation, and loading processes, resulting in a **60% reduction** in data processing time.
- **Developed a web application using .NET Core and Flask services**, providing comprehensive data visualization and precise finance calculations as a solution empowering stakeholders with data-driven insights, leading to a **15% improvement** in financial decision-making.
- **Automated deployments CI/CD pipelines** on Azure DevOps, enabling efficient and automated deployments of the web application to ensure streamlining and a reliable deployment process, reducing deployment time by 70%.

DATA ENGINEER | **VECTUX ANALYTICS** | *ADVANCE ANALYTICS CONSULTING* | REMOTE
OCTOBER 2020 – OCTOBER 2022

- **Designed, developed, and deployed** a range of **client projects** that improved data efficiency and decision-making:
  - **ETL development** for streamlined data ingestion, reducing data processing time by **30%**.
  - **Python scraping scripts** to automate data collection.
  - **Robotic Process Automation** (RPA) for **efficient data extraction**, increasing data extraction rate by **40%**
  - Utilized Flask applications for user-friendly predictions,
  - **Designed BI and Data Lake architecture for scalable data management** using Terraform.
- **Led the development and maintenance of the company's core product**, including hosting Power BI-embedded dashboards for insightful data visualizations and implementing RFM analysis to improve customer segmentation, leading to a **70% increase in customer retention**.
- **Deploying machine learning models** for accurate predictions, empowering users with data-driven decision-making.

DATA ENGINEER | **HALLIBURTON LATIN AMERICA** | *OIL & GAS COMPANY* |QUITO, ECUADOR
NOVEMBER 2018 – FEBRUARY 2020

- Oversaw the **ETL migration** project to optimize the data warehouse architecture by migrating ETLs and visualizations from Pentaho to Microsoft Power BI, reducing licensing costs and improving accessibility of dashboards.
- **Led database migration project of migrated queries and stored procedures from Oracle to Microsoft SQL Server**, improving the database by adding new functionalities such as scraping and data parsing.

EDUCATION

B.S. in Computer Engineering | Pontifical Catholic University of Ecuador

CERTIFICATIONS

Azure Data Fundamentals | Microsoft | April 2022
